

Financial Synthesis Project

Offered by Structured Consulting Limited Malta

Financial climate

The Fed's recent QE3 announcementⁱ is a global game changer. The currency war (competitive devaluation) is the new reality. We know now what the next few years will bring: **inflation**.

It is difficult for US investors to combat inflation. The new regulatory environment prohibits US entities to open foreign brokerage accounts and use leverage on gold trades. The Fed has signaled what will happen in the short and medium term, so there is a clear 3 year period that can provide investment opportunity. Many savers and economic players not properly positioned may have their assets significantly reduced through inflation. Special risk categories are annuities and other fixed income instruments.

Regulatory financial situation in US has been restrictive for investors, and it will continue to be. New rules and regulations such as the Dodd-Frank act have created a containment area for US investors. Some examples of these restrictions are the 'no-hedging' Forex rule, the FIFO rule, no leverage on Gold trading, PAMM restrictions, and US entities are prevented from having foreign brokerage accounts. These rules did not prevent MF Global and PFG from mismanagement.

US investors are limited to the products and options available through US institutions. The rules can become even more restrictive; it was illegal to own physical gold as of 1933 in the United Statesⁱⁱ.

The oldest Swiss bank has recently closed, and the world's oldest bank in Italy, founded in 1472, needs a government bailout to survive. Germany is repatriating their physical gold holdings from countries such as the United States and France.

Proposal

Structured Consulting Limited, a registered company in Malta, is proposing that a group of investors establish their own financial institution to protect their own assets.

The project purpose is to create a new type of hybrid financial institution owned and operated by its members.

We are seeking \$2 Million USD in order to register a financial institution in Malta under European Union financial jurisdiction and special tax regime for foreign entities.

The final goal of the project is to establish a chartered investment bank in Malta.

- Projected timeframe is 200 days and projected cost is \$2 Million USD for establishment of category 3 financial institution in Malta.
- Individual subscription is \$400,000 (up to 5 investors), for which an investor will receive 10% equity.
- The risk exposure pending license approval (up to 200 days) is 10% of invested funds.

The final goal is that founders have a full control of their funds by owning their own institution, in a tax friendly environment. Investors will have the ability to protect their assets using wealth preservation tools and profit generating strategies.

Mission Statement

In the immediate international financial climate it is imperative that any organization and individual has a vehicle to ensure financial stability to make possible growth and expansion. This vehicle should stabilize severe fluctuation and inflationary pressure in order to preserve intrinsic value of any monetary investment. This structure should provide protection against potential institutional and sovereign default.

Summary

The following procedures should be implemented:

- Hedging of existing portfolio
- Multiple currency based accounts
- Hedged spot Forex trading to ensure capital preservation
- Forex options and Forex futures
- Dynamic currency presence to protect from competitive devaluation and political influence on Forex market
- Commodity options and futures to capitalize on inflationary pressure
- Equity Contracts for Difference to hedge existing US market position

Goals:

- To preserve intrinsic value of capital
- Optimize financial structure for future business operations
- Reduce risk of banking defaults, sovereign defaults, increase in taxes, and debasement of currency (inflation)
- To operate in a tax friendly environment

Partners:

- Institutions such as Banks, Trusts, Family Offices
- QEPs (Qualified Eligible Participants)
- New members by invitation or recommendation only

Conclusion

Existing regulatory environment and newly added inflationary pressure requires prompt action and restructuring of existing portfolios.
